1 Introduction

Introduction

The scope document is a foundational blueprint for your product. It captures a shared understanding of your goals, key features, user journeys, and technical requirements before development begins. For you as the customer, it ensures transparency — giving you clarity on what will be built, how it will work, and what outcomes to expect. For the development team, it provides the detailed guidance they need to design the architecture, write code efficiently, and stay aligned with your priorities. A well-defined scope reduces risk, avoids misunderstandings, and ensures your product is delivered on time, on budget, and as expected.

2 Overview

Overview

App objectives, purpose, and pain points

App Objectives

Provide an easy to use portal for people to browse "Luxury" properties.

App Purpose

To provide an edge to the client in the current market, competing against other large property search providers, but with a more direct pipeline, as the app facilitates direct chats with estate agents & ensure listing are current and accurate.

Pain Points

Browsing for Luxury properties, especially overseas can be a tedious process. Listings are often severely out-dated and finding houses relevant to your requirements. The app looks to simplify this by forcing estate agents to keep their listings current and updated while also making the search process far simpler

3 Scope Detail

Scope Detail

Project overview and application specifications

Project Description

Real Estate "Marketplace" app. Agencies list properties. Users browser and reach out about interest.

Application Specifications

Application Type

web-responsive | native-mobile | mobile-web

Web Responsive: A responsive web application that adapts to different screen sizes and devices. Best for applications that need to work across desktop, tablet, and mobile browsers with a single codebase.

Native Mobile: A native mobile application built specifically for iOS and/or Android platforms. Offers optimal performance and access to device-specific features and capabilities.

Mobile Web: A mobile-optimized web application designed specifically for mobile browsers. Provides a mobile-first experience while remaining accessible on desktop devices.

Market Type

marketplace

Marketplace: Apps designed to serve multiple customer groups — typically connecting providers (e.g., sellers, freelancers) with consumers (e.g., buyers, clients). These platforms support interactions and transactions between distinct user types, functioning as intermediaries rather than serving a single audience type.

4 Technology Stack

Technology Stack

Technology stack, database, and integrations used in the application

Tech Stack Details

The application should be built using a modern web framework such as React for the frontend and Node.js for the backend. React Native can be used for developing the mobile application to ensure a seamless experience across web and mobile platforms. The application should leverage RESTful APIs

for communication between the frontend and backend. Real-time chat functionality can be implemented using WebSockets or a service like Firebase Real-time Database.

Database

A relational database like PostgreSQL is recommended for this application due to its support for complex queries and relationships, which are essential for handling property listings and user interactions. The database should be structured to efficiently manage user data, property listings, inquiries, and search parameters, with indexing on key fields such as property location and price to optimize search performance.

APIs & Integrations

- **The API architecture should be RESTful, with endpoints such as '/api/users', '/api/agencies', '/api/properties', '/api/inquiries', and '/api/searches'. Each endpoint should support CRUD operations where applicable, with additional endpoints for handling authentication and user sessions, chat functionality, and property search with filters. Consider using Swagger for API documentation to facilitate integration and testing.**

Security & Authentication

Default Bubble Authentication.

The standard Bubble account system should be sufficient to handle the requirements.

Hosting & Deployment

Million Labs LAUNCH Hosting

The hosting package includes App, database & file storage hosting. The app and file storage are hosted on Google Cloud and the database uses Neon.

Data Location

United States.

Bubble's servers are based here. Data is still GDPR compliant even with the non-Europe storage, provided appropriate setup of privacy rules

5 Monetization Strategy

Monetization Strategy

Revenue model and monetization approach for the application

Monetization Model

The monetization model involves charging real estate agencies a recurring monthly subscription fee to list properties on the platform. Agencies will pay based on the number of properties they wish to list, with different pricing tiers available. Buyers will use the app for free, ensuring a large user base and increasing the value for agencies.

Products

These products are required to meet the monetization strategy of this app

Stripe Subscriptions

Enhanced

Stripe Subscriptions (part of Stripe Billing) is Stripe's solution for managing recurring payments. It's used when your app charges users on a regular schedule (e.g. weekly, monthly, yearly). Handles automatic billing, proration, and renewals. Supports free trials, coupons, discounts, and usage-based or tiered pricing. Includes tools for reducing churn like smart retries and failed payment recovery. Works with multiple payment methods (cards, ACH, wallets, etc.) and currencies. In short: Stripe Subscriptions is for apps or services with recurring revenue models like SaaS platforms, streaming apps, memberships, or digital services. 👉 Example: If you're building an app like Netflix, Spotify, or a SaaS dashboard — you'd use Stripe Subscriptions.

6 User Personas

User Personas

Target user profiles and characteristics for the application

Emma Rodriguez

Real Estate Agent

Goals

Increase visibility of listings,Attract international buyers,Maintain up-to-date property information

Pain Points

Difficulty reaching international clients,Managing multiple property updates,Competing with other agencies for visibility

Demographics & Behaviors

Technical proficiency: Intermediate

Sophia Chen

Property Buyer

Goals

Find a home within budget in a desired location,Get timely updates on listings,Easily contact Estate Agent

Pain Points

Overwhelmed by the number of options,Doesn't know if information they see is current

Demographics & Behaviors

Technical proficiency: Beginner

Miremont Admin

System Administrator

Goals

Ensure smooth operation of the app,Manage user access

Pain Points

Managing high volumes of user data,Ensuring data security and compliance

Demographics & Behaviors

Technical proficiency: Expert

Data Entities

Newsletter subscription

a list of users who have signed up to the newsletter

Fields: user (User), email (text), name (text)

Relationships:

Newsletter subscription → User

one-to-one *A user can subscribe to the newsletter*

ArticleContent

Content for Article items. Versioning system style to support drafts.

Fields: article (Article), titleLang1 (text), titleLang2 (text), titleLang3 (text), titleLang4 (text), bodyLang1 (richtext), bodyLang2 (richtext), bodyLang3 (richtext), bodyLang4 (richtext), modifiedDate (date), version (integer)

Relationships:

Article → ArticleContent

one-to-many *Articles can have many versions of content simultaneously, but only one active version at a time*

Article

News/Blog Article

Fields: publishedDate (date), thumbnail (image), contentVersions (list of ArticleContent), currentContent (ArticleContent), category (enum), Author (text), status (enum)

Relationships:

Article → ArticleContent

one-to-many *Articles can have many versions of content simultaneously, but only one active version at a time*

Messages

Messages between Home buyers and Agencies

Fields: Sender (User), Content (Text), Attachments (List of files), Read by (List of Users)

Relationships:

Inquiry → Messages

one-to-many *An inquiry allows for messaging between the Agency and the Buyer*

Categories

The Category tagging system for properties

Fields: Category Name (Text), Category subset (OSCategoryType)

Relationships:

Search → Categories

many-to-many *Searches can use multiple categories*

Property → Categories

many-to-many *Properties can have many Categories*

User

Represents a user of the Miremont application, including buyers and agency representatives.

Fields: id (UUID), name (String), email (String), profile picture (Image), userType (Enum: Buyer, Agency, Admin), subscriptionPlan (SubscriptionPlan), Agency Name (String), contactInfo (String), Saved Searches (List of Searches), Favourited Properties (List of Properties), Listed Properties (List of Properties)

Relationships:

User → Inquiry

one-to-many *A user can make multiple inquiries about properties.*

User → Search

one-to-many *A user can save multiple search parameters for future use.*

User → Property

one-to-many *One Agent can list many properties*

Newsletter subscription → User

one-to-one *A user can subscribe to the newsletter*

Property

Details of properties listed by agencies, searchable by buyers.

Fields: id (UUID), title (String), description (Text), location (Geolocation), price (Decimal), currency (String), size (Decimal), sizeUnit (Enum: square meters, square feet), features (List of Strings), Categories (List of Categories), images (List of URLs), lastUpdated (Date), listedDate (Date), status (Enum: Active, Inactive)

Relationships:

Property → Inquiry
one-to-many *A property can have multiple inquiries from different users.*

Property → Categories
many-to-many *Properties can have many Categories*

User → Property
one-to-many *One Agent can list many properties*

Inquiry

Represents inquiries made by buyers about specific properties.

Fields: id (UUID), property (Property), user (User), messages (List of Messages), date (DateTime)

Relationships:

User → Inquiry
one-to-many *A user can make multiple inquiries about properties.*

Property → Inquiry
one-to-many *A property can have multiple inquiries from different users.*

Inquiry → Messages
one-to-many *An inquiry allows for messaging between the Agency and the Buyer*

Search

Stores search parameters saved by users for future reference.

Fields: id (UUID), userId (UUID), dateSaved (DateTime), Location (Geolocation), Categories (List of Category)

Relationships:

User → Search
one-to-many *A user can save multiple search parameters for future use.*

Search → Categories
many-to-many *Searches can use multiple categories*

9 Features

Feature Requirements

Detailed feature specifications and requirements for the application

In Scope (v1)

User Registration/Signup

v1 Authentication

Allow new users to create accounts using their email and password, enabling them to access the app's features.

Applicable Personas

Emma Rodriguez (Real Estate Agent)

Sophia Chen (Property Buyer)

Miremont Admin (System Administrator)

Use Cases

- Emma registers to list properties.
- Sophia signs up to browse and save properties.

User Login

v1 Authentication

Enable users to securely access their accounts using their email and password.

Applicable Personas

Emma Rodriguez (Real Estate Agent)

Sophia Chen (Property Buyer)

Miremont Admin (System Administrator)

Use Cases

- Emma logs in to update property listings.
- Sophia logs in to view saved properties.

Password Recovery

v1 Authentication

Allow users to reset forgotten passwords via email to regain access to their accounts.

Applicable Personas

- Emma Rodriguez (Real Estate Agent)
- Sophia Chen (Property Buyer)
- Miremont Admin (System Administrator)

Use Cases

- Sophia resets her password after forgetting it.
- Emma uses password recovery to regain access to her account.

Profile Management

v1 User Profile & Settings

Allow users to view and update their profile information including name and email.

Applicable Personas

- Emma Rodriguez (Real Estate Agent)
- Sophia Chen (Property Buyer)
- Miremont Admin (System Administrator)

Use Cases

- Emma updates her email address.
- Sophia changes her display name on her profile.

Password Change

v1 User Profile & Settings

Enable users to update their password while logged in to enhance account security.

Applicable Personas

- Emma Rodriguez (Real Estate Agent)
- Sophia Chen (Property Buyer)
- Miremont Admin (System Administrator)

Use Cases

- Sophia changes her password for security reasons.
- Emma updates her password after logging in.

Avatar Upload

v1 User Profile & Settings

Allow users to upload and update their profile picture for personalization.

Applicable Personas

- Emma Rodriguez (Real Estate Agent)
- Sophia Chen (Property Buyer)
- Miremont Admin (System Administrator)

Use Cases

- Emma uploads a new profile picture.
- Sophia changes her avatar to a new image.

Account Settings

v1 User Profile & Settings

Provide an interface for users to manage their account preferences and settings.

Applicable Personas

Emma Rodriguez (Real Estate Agent)

Sophia Chen (Property Buyer)

Miremont Admin (System Administrator)

Use Cases

- Sophia adjusts her notification preferences.
- Emma updates her account settings.

User Management Dashboard

v1 Admin

Allow admins to view, search by name/email, and filter all users by status, role, and registration date.

Applicable Personas

Miremont Admin (System Administrator)

Use Cases

- Admin searches for a specific user to review their account status.

User Status Management

v1 Admin

Enable admins to activate, deactivate, or delete user accounts.

Applicable Personas

Miremont Admin (System Administrator)

Use Cases

- Admin deactivates an inactive user account.
- Admin deletes an account that violates terms of service.

User Plan Management

v1 Admin

Allow admins to assign custom subscription plan values to users. If the user currently has an existing Stripe subscription, this functionality should be disabled for that user. If the user does not have a subscription, or is on a custom plan, this should be available. Payment will be collected off-platform for this, but the Admin can freely configure the values for the user. These values will be the same variables as the subscriptions control, such as listing slots.

Applicable Personas

Miremont Admin (System Administrator)

Use Cases

- Admin adds custom subscription to a user
- Admin adjusts values for a user

Notifications

v1 Core

System for alerting users about important events or updates within the app.

Applicable Personas

Emma Rodriguez (Real Estate Agent)

Sophia Chen (Property Buyer)

Use Cases

- Sophia receives a notification about a new property listing.
- Emma gets notified when a buyer inquires about her listing.

Search Functionality

v1 Core

Allow users to search for content/data within the app using various filters and criteria.

Applicable Personas

Sophia Chen (Property Buyer)

Use Cases

- Sophia searches for beachfront properties in Spain.
- Sophia uses filters to find properties within her budget.

Subscription Management

v1 Payments & Billing

Allow agencies to subscribe to pricing plans with tier-based access to features and property listing limits.

Applicable Personas

Emma Rodriguez (Real Estate Agent)

Use Cases

- Emma subscribes to a Pro plan for more listing slots.
- Emma upgrades her plan as her agency grows.

Billing Dashboard

v1 Payments & Billing

Enable agencies to view their current subscription, billing history, and invoices with search and date filters.

Applicable Personas

Emma Rodriguez (Real Estate Agent)

Use Cases

- Emma reviews her billing history for accounting purposes.
- Emma downloads invoices for the past three months.

Property Listing Management

v1 Core

Allow agencies to upload, update, and manage property listings with mandatory fields for features and images. Listings should automatically de-list if they have not been updated in the last 30 days. Run a daily workflow that checks all listings and their "last updated" date. De-list (hide) any that are visible and exceed the period. Send a generic email to all affected users that "one or more of your listings have been hidden due to stagnation. To re-list them, please review each listing and ensure the data is as up-to-date as possible.

Applicable Personas

Emma Rodriguez (Real Estate Agent)

Use Cases

- Emma uploads new property listings.
- Emma updates existing listings with new images.
- Properties listed MUST be at least 500,000 USD in value

Chat System

v1 Core

Facilitate communication between buyers and agencies with a chat feature that supports both online and offline messaging.

Applicable Personas

Emma Rodriguez (Real Estate Agent)

Sophia Chen (Property Buyer)

Use Cases

- Sophia inquires about a property through chat.
- Emma responds to buyer questions via the chat feature.

Saved Searches

v1 Core

Allow buyers to save their property search criteria for easy access and notifications on new listings matching their criteria.

Applicable Personas

Sophia Chen (Property Buyer)

Use Cases

- Sophia saves a search for penthouses in Madrid.
- Sophia receives notifications for new listings matching her saved search.

Property Favorites

v1 Core

Enable buyers to save and organize favorite properties for later viewing and comparison.

Applicable Personas

Sophia Chen (Property Buyer)

Use Cases

- Sophia marks a beachfront property as a favorite.
- Sophia reviews her favorite listings before making a decision.

Map and Listing View

v1 Core

Provide buyers with both map and listing views to explore properties by location and details.

Applicable Personas

Sophia Chen (Property Buyer)

Use Cases

- Sophia uses the map view to find properties in specific neighborhoods.
- Sophia switches to listing view for detailed property information.

Multi-language Support

v1 Core

Support multiple languages for static app text and translate property descriptions using an external API.

Applicable Personas

Emma Rodriguez (Real Estate Agent) Sophia Chen (Property Buyer)

Use Cases

- Sophia views the app in her preferred language.
- Emma provides property descriptions in multiple languages.

Admin Dashboard

v1 Admin

Allow admins to oversee platform activity, manage users, and track system performance.

Applicable Personas

Miremont Admin (System Administrator)

Use Cases

- David monitors system activity through the dashboard.
- David manages user accounts from the admin panel.

Currency Conversion Widget

v1 Core

Provide a widget to convert property prices into different currencies based on user preference.

Applicable Personas

Sophia Chen (Property Buyer)

Use Cases

- Sophia converts property prices from USD to EUR.
- Sophia uses the widget to see real-time conversion rates.

News/Blog function

v1 Core

Admin users should be able to create/edit/delete articles through an admin panel page. This should be managed by a popup. Realtors & Property buyers should be able to browser these articles & view any chosen item seamlessly. The content of the article should support rich text, allowing for images to be placed into the content. Articles should be able to be created/updated without developer support Articles need to support the multi-language functionality Articles need to support versioning of content (so that drafts can be made without impacting current content)

Applicable Personas

Emma Rodriguez (Real Estate Agent)

Sophia Chen (Property Buyer)

Miremont Admin (System Administrator)

Use Cases

- Admin creates Article
- Admin edit Article
- User browses Articles
- User views a specific Article

Subscription Currency Support

v1 Core

Estate agents should be able to pay for their subscription in their own currency, with pricing being region dependant. Payments (and payout to client) will be handled through Stripe. The country detection would probably need to be handled through geolocation detection. If this sort of setup cannot be done, for certain region/in general, there should be a "get in touch" plan. This special plan cannot be bought, but allows them to talk to the Client to discuss their plan and handle payments off-platform for a custom package that is tailored to them. There is already Admin functionality scoped out to support applying custom plans to users.

11 Test Cases

Test Cases

Comprehensive end-to-end test cases for quality assurance (25 total)

Admin User Management

2 test cases

Test: User Management Dashboard - Coverage

medium | draft

Verify that an admin can search for users by name/email and filter users by status, role, and registration date in the user management dashboard.

Test Steps:

1. Verify that an admin can search for users by name/email and filter users by status, role, and registration date in the user management dashboard.
   Expected: Feature works as expected

Expected Result:

The feature functionality is verified

Related Features:

User Management Dashboard

Test: User Status Management - Coverage

medium draft

Verify that an admin can deactivate and delete user accounts from the user management dashboard.

Test Steps:

1. Verify that an admin can deactivate and delete user accounts from the user management dashboard.
   Expected: Feature works as expected

Expected Result:

The feature functionality is verified

Related Features:

User Status Management

Authentication

3 test cases

User Registration - Happy Path

critical draft Sophia Chen

Verify that a new user can successfully register with valid email and password.

Test Steps:

1. Navigate to the registration page.
   Expected: Registration page is displayed.
2. Enter a valid email and password.
   Expected: Email and password fields are populated.
3. Submit the registration form.
   Expected: User is redirected to the dashboard.

Expected Result:

User account is created, and user is logged in.

Related Features:

User Registration/Signup

Login with Valid Credentials

critical | draft | Emma Rodriguez

Verify that a user can log in with valid credentials.

Preconditions:

- User has a registered account.

Test Steps:

1. Navigate to the login page.
   Expected: Login page is displayed.
2. Enter valid email and password.
   Expected: Email and password fields are populated.
3. Submit the login form.
   Expected: User is redirected to the dashboard.

Expected Result:

User is successfully logged in.

Related Features:

User Login

Password Recovery via Email

high | draft | Sophia Chen

Verify that a user can recover their password via email.

Preconditions:

- User has a registered account.

Test Steps:

1. Navigate to the password reset page.
   Expected: Password reset page is displayed.
2. Enter the registered email address.
   Expected: Email address field is populated.
3. Submit the password reset request.
   Expected: User receives a password reset email.

Expected Result:

User receives an email with a link to reset their password.

Related Features:

Password Recovery

Billing & Subscriptions

3 test cases

Subscription Management - Upgrade Plan

critical | draft | Auth Required | Emma Rodriguez

Verify that an agent can upgrade their subscription plan via the billing dashboard.

Preconditions:

- Agent is logged in.
- Agent is on a basic subscription plan.

Test Steps:

1. Navigate to the billing dashboard.
   Expected: Billing dashboard is displayed.
2. Select an upgrade option.
   Expected: Upgrade option is selected.
3. Confirm the upgrade.
   Expected: Subscription is upgraded.

Expected Result:

Agent's subscription plan is successfully upgraded.

Related Features:

Subscription Management

Admin Assign Custom Subscription Plan

high | draft | Auth Required | Miremont Admin

Verify that an admin can assign a custom subscription plan to a user without an active Stripe subscription.

Preconditions:

- Admin is logged in.
- User does not have an active Stripe subscription.

Test Steps:

1. Navigate to the admin dashboard.

Expected: Admin dashboard is displayed.

2. Locate the user in the user management section.
Expected: User is located.

3. Assign a custom subscription plan to the user.
Expected: Custom plan is assigned successfully.

Expected Result:

User is assigned a custom subscription plan without Stripe restrictions.

Related Features:

User Plan Management

Subscription Currency Support

medium | draft | Auth Required | Emma Rodriguez

Subscription should offer region specific pricing to the user. If region pricing is unavailable, they should be offered only the "get in touch" plan.

Test Steps:

1. Reach subscription page
Expected: Subscriptions shown in local currency with region pricing

Listing Details

1 test case

Currency Conversion - Display in Preferred Currency

medium | draft | Auth Required | Sophia Chen

Verify that property prices can be converted and displayed in a preferred currency.

Preconditions:

- User is logged in.

Test Steps:

1. Navigate to the property listings page.
Expected: Property listings page is displayed.

2. Select a preferred currency from the currency conversion widget.
Expected: Preferred currency is selected.

3. View property prices in the selected currency.

Expected: Prices are displayed in the selected currency.

Expected Result:

Property prices are correctly converted and displayed in the user's preferred currency.

Related Features:

Currency Conversion Widget

Messaging System

1 test case

Chat System - Send Message

high | draft | Auth Required | Emma Rodriguez

Verify that an agent can send a message to a potential buyer through the chat system.

Preconditions:

- Agent is logged in.
- Chat conversation is initiated by a buyer.

Test Steps:

1. Navigate to the chat page.
   Expected: Chat page is displayed.
2. Select a conversation with a buyer.
   Expected: Conversation is opened.
3. Enter a message and send it.
   Expected: Message is sent and appears in the chat.

Expected Result:

Message is successfully sent and visible in the conversation.

Related Features:

Chat System

News Articles

4 test cases

Create & Publish Article

medium | draft | Auth Required | Miremont Admin

Admin creates a new article

Test Steps:

1. Admin creates article
   Expected: Article is made as draft

2. Admin publishes article
   Expected: Article is now visible on /news page

Related Features:

News/Blog function

Admin creates new content for an Article

medium | draft | Auth Required | Miremont Admin

Admin creates content for Article as a draft, then publishes the content once happy with it

Preconditions:

- Existing Article

Test Steps:

1. Admin creates and edits new content for article
   Expected: Content is created but is not visible to users on live article

2. Admin publishes newly made content by setting is as "active" content
   Expected: Content is now visible to users, replacing the old content

Subscribe to Newsletter

medium | draft | Sophia Chen

Users can signup for the newsletter via the /news page

Test Steps:

1. User clicks signup button
   Expected: Popup appears

2. User's details are captured
   Expected: Saved to database

User views article

medium | draft

User browses available articles and selects a specific one

Preconditions:

- Articles must be published

Test Steps:

1. User selects article
   Expected: Article opens and displays correctly

Property Listings

4 test cases

Property Listing Management - Upload New Listing

critical | draft | Auth Required | Emma Rodriguez | Content Required

Verify that an agent can upload a new property listing with all mandatory details.

Preconditions:

- Agent is logged in.

Test Steps:

1. Navigate to the property listings page.
   Expected: Property listings page is displayed.
2. Click on 'Add New Listing'.
   Expected: New listing form is displayed.
3. Enter all mandatory details and upload property images.
   Expected: Details are entered and images are uploaded.
4. Submit the new listing.
   Expected: Listing is saved and appears in the listings page.
5. Ensure property value is minimum 500,000 USD
   Expected: System should reject any value lower than 500,000 USD

Expected Result:

New property listing is uploaded successfully and visible to potential buyers.

Related Features:

Property Listing Management

Search Functionality - Filter by Price Range

medium | draft | Auth Required | Sophia Chen

Verify that users can filter property listings by a specified price range.

Preconditions:

- User is logged in.

Test Steps:

1. Navigate to the property listings page.
   Expected: Property listings page is displayed.
2. Set a filter for properties within a price range of $100,000 to $300,000.
   Expected: Price filter is applied.
3. Click 'Search'.
   Expected: Listings are filtered by the specified price range.

Expected Result:

Only properties within the specified price range are displayed.

Related Features:

Search Functionality

Test: Property Listing Management - Coverage

medium draft

Verify that properties not updated in the last 30 days are automatically de-listed and that users receive a notification email about the de-listing.

Test Steps:
